

Laser Processing and Diagnostics

By Bäuerle, Dieter W.

Book Condition: New. Publisher/Verlag: Springer, Berlin | Proceedings of an International Conference, University of Linz, Austria, July 15-19, 1984 | Laser processing is now a rapidly increasing field with many real and potential applications in different areas of technology such as micromechanics, metallurgy, integrated optics, and semiconductor device fabrication. The necessity for such sophisticated light sources as lasers is based on the spatial coherence and the monochromaticity of laser light. The spatial coherence permits extreme focussing of the laser light resulting in the availability of high energy densities which can be used for strongly localized heat- and chemical-treatment of materials, with a resolution down to less than 1 μm. When using pulsed or scanned cw-lasers, localization in time is also possible. Additionally, the monochromaticity of laser light allows for control of the depth of heat treatment and/or selective, nonthermal bond breaking - within the surface of the material or within the molecules of the surrounding reactive atmosphere - simply by tuning the laser wavelength. These inherent advantages of laser light permit micromachining of materials (drilling, cutting, welding etc....)

Reviews

This publication is really gripping and exciting. It really is basic but unexpected situations in the 50 % in the book. It is extremely difficult to leave it before concluding, once you begin to read the book.

-- Prof. Salvador Lynch

This publication will be worth purchasing. This is for all those who state there was not a worthy of reading through. I discovered this publication from my dad and I suggested this pdf to find out.

-- Macey Cummerata
